Celebrating 35 years of sustainable land management

The Kimseed TV Camera Holder is designed to effectively support a TV type Filming Camera so that vibration is eliminated and a steady image is achieved. A combination of vertical and horizontal spring mechanisms and the use of high precision ball bearing runners results in a smooth operation under all conditions. Fail Safe Connections have been incorporated to all coupled parts. The Fail Safe concept prevents joined components to separate by double locking connection points. Engineered to comply with strictest aviation standards, the Kimseed Camera Holder has been certified by Australian Aviation Authorities. Please note that Certification is required on each individual unit. Kimseed will provide all required Technical Data and Drawings to meet Local Certification Requirements.
