1.5 & 2 metre Brush Harvester for Front End Loader

The **Kimseed Brush Harvester** provides a simple and effective means of collecting grass seeds. As the harvester moves through the seeding grasses, ripened seed is combed upwards off the plants and thrown rearwards into a catchment hopper. The seed collected by the Harvester is relatively clean and requires minimal cleaning or processing and is therefore more cost effective.

It can be attached to the front end loader of a small tractor or Bobcat.

Height Adjustment: From tractor.

Two models are available with either 1.5 or 2-metre brush (harvesting) width.
