Kimseed Pottiputki Manual Seedling Planter

The **Kimseed Pottiputki®** is an **efficient** and **ergonomic** way to manually plant containerised seedlings.

- Ergonomic design – no more painful back bending
- Easy to operate – a single operator can plant over 2000 seedlings per day.
- By driving the Pottiputki directly into the ground and with one simple operation a hole is created for the seedling to be dropped down the tube and released.
- Retract the tube from the ground and reset the jaws for reloading with the next seedling.
- 3 distinct sizes to cover most planting jobs.
- Adjustable jaw to suit a wide variety of soil types.

Applications:

Size 55: Forestry seedlings and cuttings, flowers, vegetables & herbs

Size 63: Larger plants and forestry seedlings

Size 75: Large cell plants – ecological revegetation projects etc.

The Kimseed Kidney tray is just perfect for transporting seedlings to be planted with pottiputki

Operation Instruction

- Simply load seedlings one at a time into the tube.
- Push the tube into the ground by stepping onto the depth limiter.
- Open the jaws with a foot-operated lever and the seedling drops into the space formed by the jaws.
- Retract the tube from the ground and reset the jaws for reloading with the next seedling.
- Loose soil can be compacted by the heel of the operator's boot.
- The ideal hand planting machine to use when the ground is too wet to use a linkage tree planter.

Specification & Prices

	<u>Total Length</u>	<u>Weight</u>	<u>Price A\$ (exc. GST)</u>
Size 55	930 mm	2.8 kg	\$325
Size 63	930 mm	3.25 kg	\$345
Size 75	930 mm	3.45 kg	\$399
Kidney Tray			\$150
